

**Project Milestone3**  
**Team007 Section 015**

Architectural Diagram:

Entity Relationship Diagram:

### **What features were completed?**

UI features: Registration page, home page, nutrition page(s), fitness page, about page, profile page, registration modal scripts via javascript, css styles, bootstrap styles

Database: User database and postgres server created in pgAdmin4

### **What worked during the demo?**

Navigation between our UI pages and modals worked correctly. All pages were able to load successfully and the database server was running with postgres user database.

### **What issues were faced either during the development or during the demo?**

Vignesh: Deciding what to include on pages such as features, understanding how servers are created for databases. Profile page was tough to layout.

Evie: Adapting registration modals from the lab to our website

Finbar: Implementing bootstrap classes in fitness page

Leah: Implementing Bootstrap carousel

Jamal: Implementing bootstrap classes in sleep page

### **What were the suggestions offered by the TA?**

Our TA suggested that we develop our ER models for our database connections.

### **Individual contributions by each team member**

Vignesh: Registration page, profile page, user database initial setup.

Evie: About page, registration modals

Finbar: Fitness page, ERD models

Leah: Architectural Diagram, Nutrition page, home page

Jamal: Sleep page, meeting notes

*Make sure one team member is noting the minutes of this meeting. You will need this information when writing the milestone document.*

***This meeting was approximately 12 minutes long***
